

Ni/Fe Saponite: A New High-Performance Anode for Lithium Ion Batteries Combining Si-based Anodes and Metal Oxides

Jian Zhang, Qing Yin, Jingbin Han*
hanjb@mail.buct.edu.cn

NiFe saponite (NF-SAP) with Na⁺ pillaring was investigated for the first time, as a high performance anode for lithium ion batteries. In this material, non-metallic element Si and metallic elements Fe, Ni all act as active components (providing specific capacity).

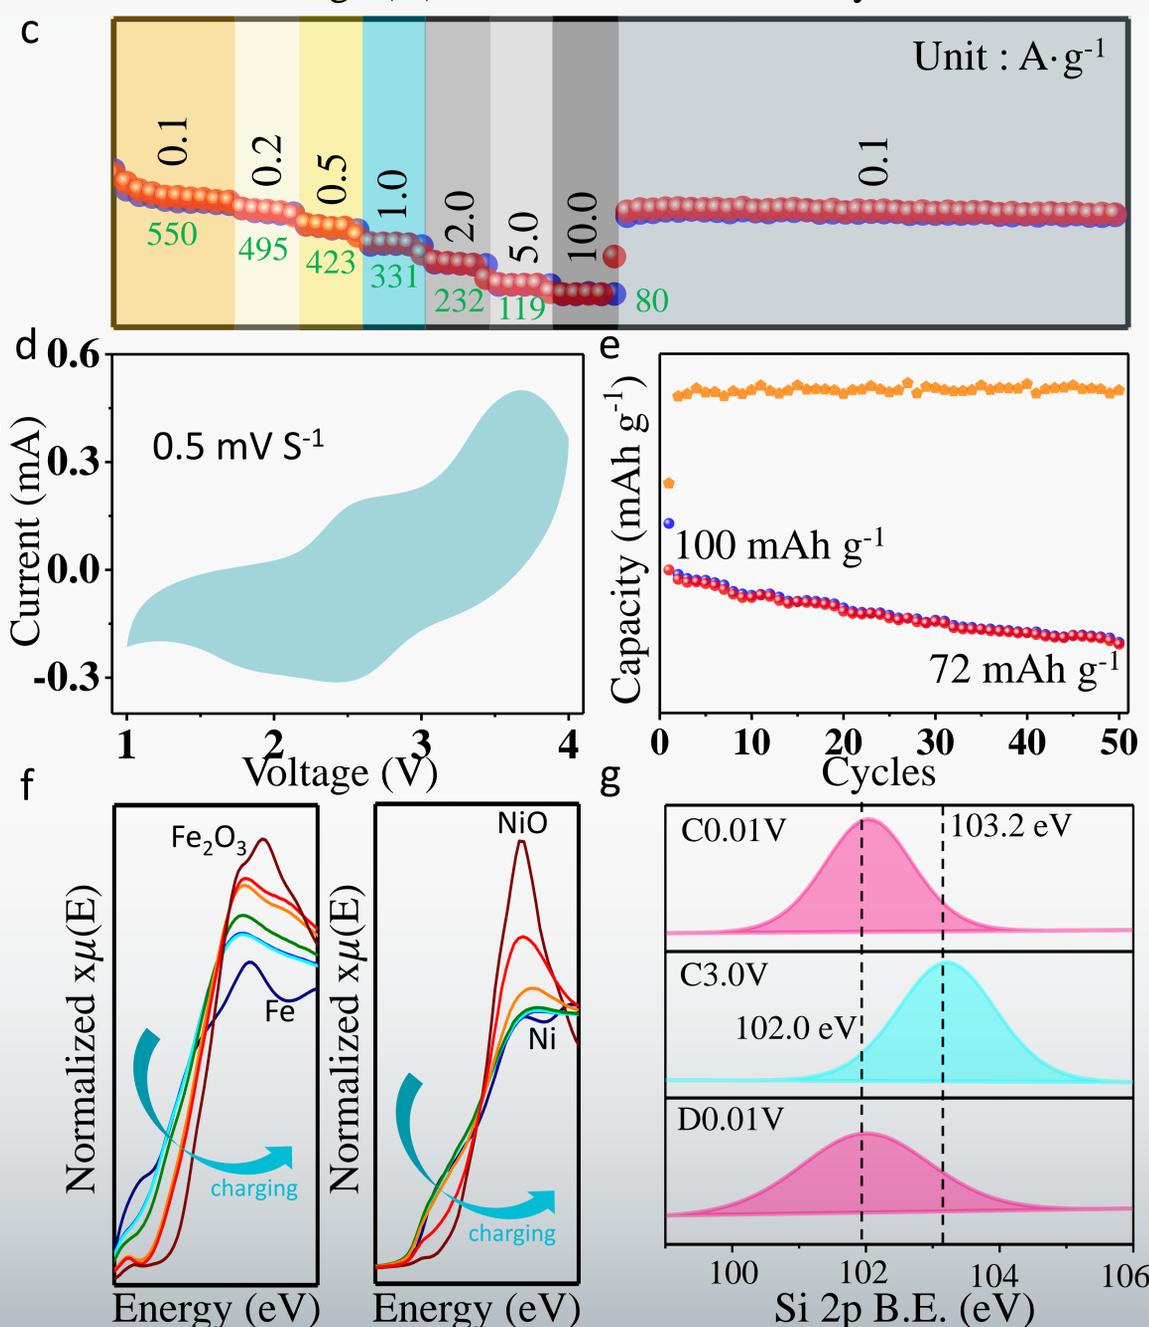

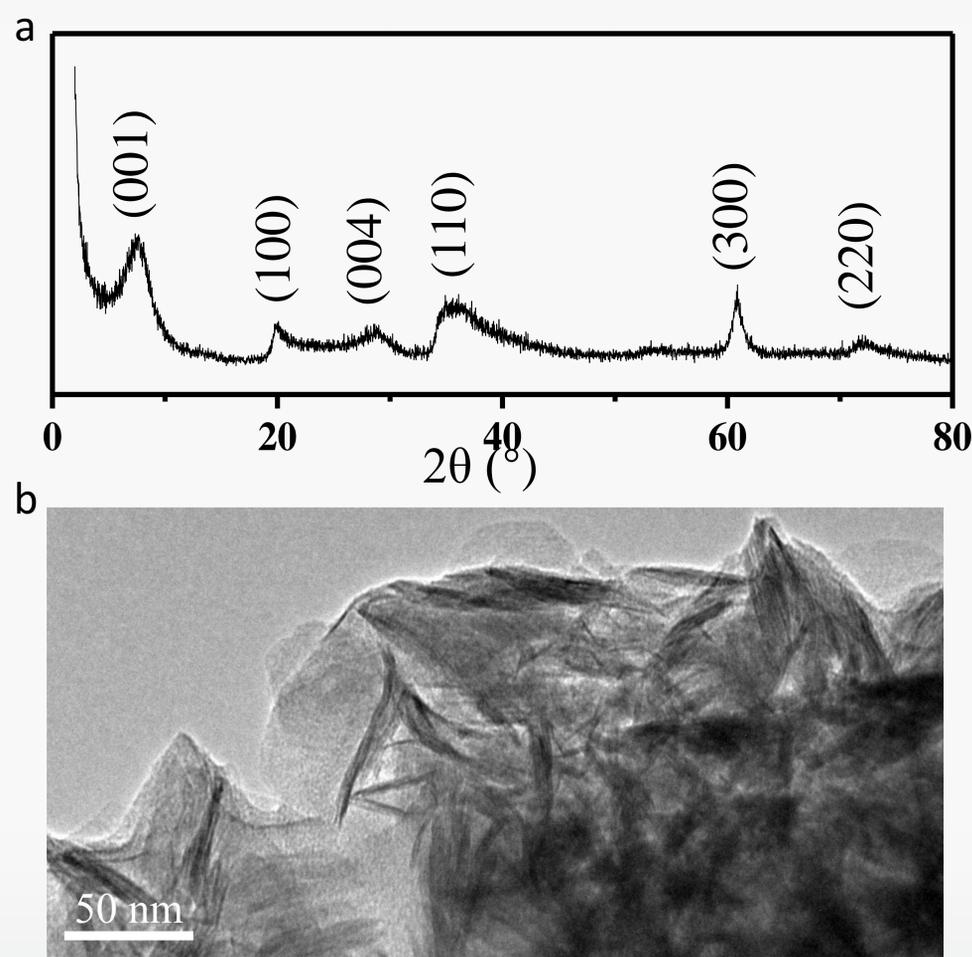

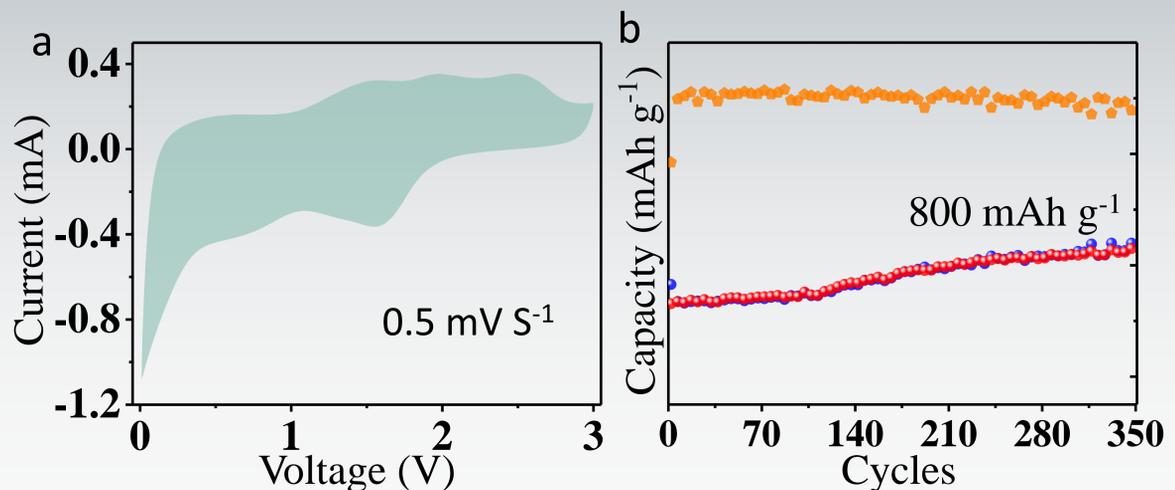

Fig. 1 (a) XRD pattern, (b) TEM image of NF-SAP.

Conclusion:

- (1) The NF-SAP/Li half cell exhibits a high performance for Li⁺ storage.
- (2) The active components include non-metallic element Si and metallic elements Fe, Ni.
- (3) The NF-SAP can be used as anode of sodium or potassium ion batteries after modification.
